About CSLP

The Collaborative Summer Library Program (CSLP) is a grassroots consortium of states working together to provide high-quality summer reading program materials for children at the lowest cost possible for their public libraries.

By combining resources and working with a commercial vendor to produce materials designed exclusively for CSLP members, public libraries in participating states or systems can purchase posters, reading logs, bookmarks, certificates and a variety of reading incentives at significant savings.

The participating systems and states develop a unified and high-quality promotional and programming product. Participants have access to the same artwork, incentives and publicity, in addition to an extensive manual of programming and promotional ideas.

- *Insects have adapted to live and survive among all groups of organisms.
- *Insects have adapted to live in all types of habitats except for the ocean.

Cool Bug Facts

- * The exoskeleton of a scorpion, made of chitin, reflects back ultraviolet rays and will glow pink or green under the moonlight or a black light. Fossilized scorpions still glow under ultraviolet after 300 million years.
- * Scorpions can live for more than a year without eating.
- * All insects are bugs but not all bugs are insects. An Insect has three body parts; a head, thorax, and abdomen. Insects have six legs and two antennae. Spiders and Scorpions have eight legs and are not considered insects.
- * Mites and Ticks are Arachnids (they have eight legs) and are related to the Spider and Scorpion.
- * Scientists believe the Mayfly is the most primitive present-day insect around. These insects are the most popular models for artificial flies.
- * Dragonflies keep their wings spread out when at rest. Most Damselflies hold their wings together above their backs when they rest. They both eat mosquitoes are good to have around.
- * You will never get bit by a male mosquito. Only the females bite.
- * Mosquitoes must dilute the blood of their victim with their saliva before they can drink it. It is the saliva that causes the bite to itch.

- *Beetles are one of the most popular pets in Japan and can be bought in many department stores!
- *Houseflies find sugar with their feet, which are 10 million times more sensitive than human tongues.
- *Ticks can grow from the size of a grain of rice to the size of a marble.

- *The queen of a certain termite species can lay 40,000 eggs per day.
- *Honeybees have to make about ten million trips to collect enough nectar for production of one pound of honey.

Cool Bug Facts

- *Blow flies are the first kind of insect attracted to an animal carcass following death.
- *To survive the cold of winter months, many insects replace their body water with a chemical called glycerol, which acts as an "antifreeze" against the temperatures.
- *There are nearly as many species of ants (8,800) as there are species of birds (9,000) in the world.
- *The male silk moth is estimated to "smell" chemicals of female silk moths in the air at the ratio of a few hundred molecules among 25 quintillion (25,000,000,000,000,000,000) molecules in a cubic centimeter of air.
- *Male mosquitoes do not bite humans, but rather live on plant juices and other natural liquids from plants and decomposing organic material.
- *About one-third of all insect species are carnivorous, and most hunt for their food rather than eating decaying meat or dung.
- *The oldest known fossil of an insect is a Springtail and dates back 400 million years.
